5G WITH BLOCKCHAIN: CREATING A COLLABORATIVE ECONOMY

with DAVID WALSH
Founding Partner at Extranet Venture Partners

Blockchain and 5G are going to transform how we live, how we do business, how we improve basic things like health and our work life.

2

The network is the best middleman for authorizing and affirming transactions, and blockchain is the best enabler to power the middleman role.

5G speed is the
killer app; it will
drive 5G forward.

4

Blockchain can radically optimize wireless business operations by federating users across 5G networks to eliminate the intergalactic waste of CAPEX that multiple carriers will spend placing cells on rooftops and running fiber to connect them.

5

5G means more traffic, which means more radios and connectivity, and more transactions between carriers.

Blockchain in the network is a perfect technology to power transactions between carriers.
